

Mobile and web app testing  
from anywhere, anytime

---

# Private Cloud Datasheet

**Our Private cloud** is an ideal solution for enterprises or companies looking to test their apps on multiple real devices in an enterprise grade secured datacenter which has CI/CD practices in place. The dedicated private cloud helps companies to streamline their DevOps processes and accelerate the delivery of quality mobile apps multi-folds.

# BENEFITS

## Limitless device time and access

pCloudy offers a perfect solution to geographically distributed teams where you have to provide us with the list of devices and we will host the devices in our enterprise grade Data Center. We save you from the hassle of setting up and maintaining a device lab as we do it for you. Moreover, you can keep the Data on our secure cloud drive for quick turnaround of your testing cycle.

## Framework agnostic with further customization

pCloudy's Private test frameworks and languages. Built on top of widely accepted open standards, it can be further customized to support your own frameworks and allow you to run the same tests locally and in the cloud.

## Enterprise Grade Security

We know how important security is for you and we take care of it to the core. Our Datacenter is compliant with internationally recognized security standards like ISO27001, SOC2 and SSAE-16. Your data is absolutely safe on our platform, with access to only authorized team members who have an access to the devices and data.

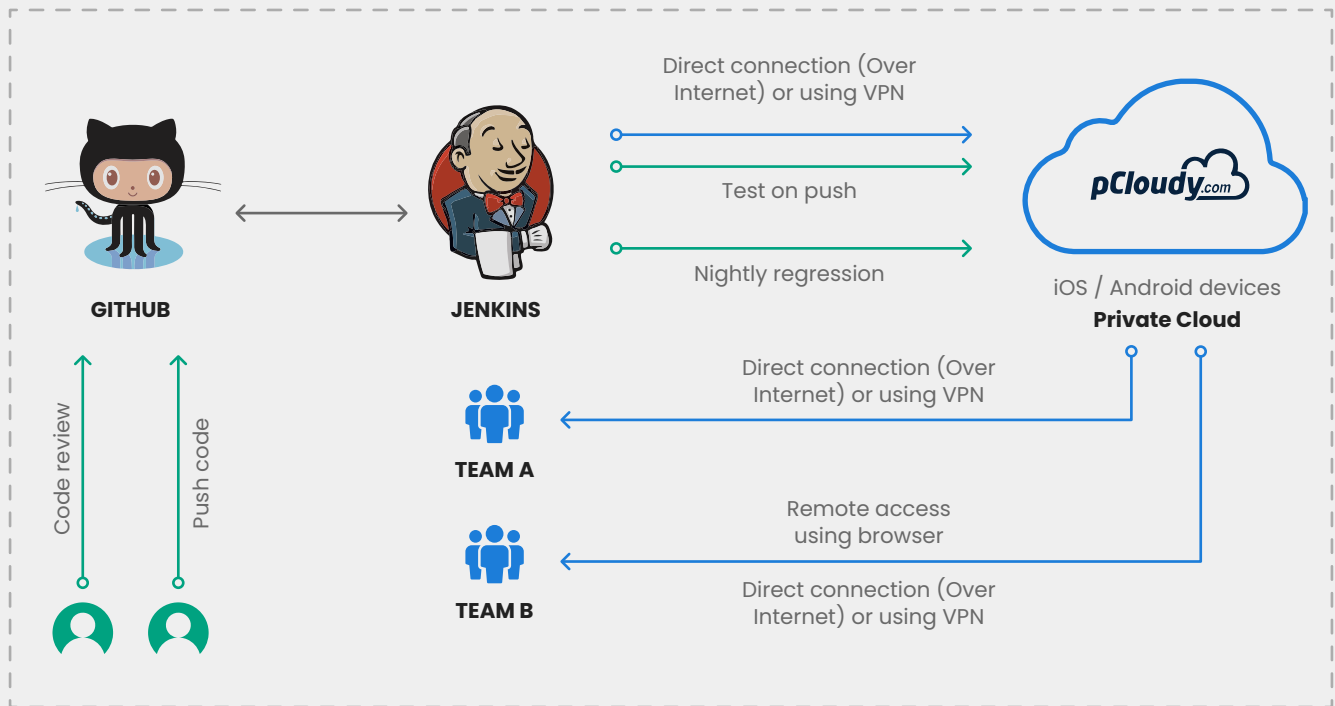

## Creation of VPN Tunnel

We can create site to site VPN tunnel to make it easier for your geographically dispersed teams to provide secure communication between sites. We only require the VPN tunnel access from you.

# Indicative Deployment of Private Cloud for Mobile DevOps

Here is an indicative deployment architecture of our dedicated mobile device cloud. Our datacenters that host our cloud are SOC - 2 / SSAE - 16 Compliant

## Recurring license

10 devices for 1 year

### Minimum commitment

( For commercials please contact us)

## 24x7 Service and Support

We value our customers more than anything else and so we are always available for them in need. Ensure 24x7 services and support so that your team has uninterrupted access. Your geographically distributed teams can access any device on private cloud anytime.

# pCloudy helped Hexaware's client reduce mobile app delivery time and costs multi-folds

## Client

One of Hexaware's client, the world's leading institutions which manages and processed commercial fuel cards and workforce payment products and services. It operates across 6 networks in North America, Canada and 9 internal networks which includes United Kingdom, Mexico, Brazil and East European.

## Business Challenge

They faced considerable challenges testing their business-critical customer facing applications across multiple OS, mobile devices and form factors. They were finding it tough to test on latest mobile devices and to keep pace with the ever-changing device market.

## Our Solution

With all the challenges around, the customer decided to go for a pCloudy hosted private cloud. In this model, the customer selected the devices of their choice and was made available over cloud, setup in a dedicated data center by pCloudy. This enabled their teams spread across geography to access devices over cloud seamlessly. They were also given an option to swap the mobile devices of their choice depending on their licensing model

## Results

This model saved them considerable amount of time (devices made available immediately) and money (physical device procurement cost) and gave them lot of flexibility of accessing latest devices by testing teams across the globe.
